

ACTIVE INCOME STRATEGY OVERVIEW

Astor Active Income employs a fundamental approach to income investing, assessing risk and opportunity across the capital market spectrum. It is designed to be a portfolio complement to traditional income strategies, using an active approach to fixed income investing. It seeks to find the asset mix that provides a more attractive yield-to-risk ratio compared to that of intermediate-term treasury bonds.

- Analyze macroeconomics, interest rates and credit data to make appropriate adjustments to duration, credit quality and equity income exposure in an effort to reduce volatility and minimize principal risk
- Add value through diversification and exposure adjustments to credit and duration in order to reduce the impact of adverse credit and rate conditions
- Generate returns during any market environment; may invest in equity and other non-fixed income asset classes to complement the portfolio's overall fixed income view

TARGET HOLDINGS

CATEGORY	DECEMBER 2019	NOVEMBER 2019
Short-Term	38.0%	38.0%
High Yield	18.0%	18.0%
Senior Loan	16.0%	16.0%
Investment Grade	26.0%	26.0%
Cash	2.0%	2.0%

The allocations presented are target allocations for the period indicated as determined by Astor's Investment Committee. Any individual investor's portfolio may be allocated differently than presented here due to many factors, including but not limited to, timing of entry into the investment program, discretionary decisions by the clients and referring advisors, and custodial limitations or the manner in which trades are executed. Allocations do not include cash or cash equivalents. Allocations are subject to change without notice.

HISTORICAL ALLOCATION BY DURATION*

AS OF 12/31/2019

*All information presented is calculated based on the asset allocations of each calendar quarter ending date only and do not account for the asset allocations during the quarter. Asset allocations are no indication of portfolio performance. For the historical allocation presented, from the third quarter 2010 going forward, the composite allocation is shown. Prior to this period, holdings from representative accounts that were invested in the model were used to calculate the allocations shown.

Source: Bloomberg, Astor. The performance data shown is through 12/31/19 and represents past performance for the composites(s) defined on the following page. Current performance may be lower or higher than the performance data quoted above. Past Performance is no guarantee of future results. Net of fee performance assumes the reinvestment of dividends. Gross of fee returns are shown as supplemental information only and represent "pure gross" returns. Pure gross returns are calculated before the deduction of all fees. Please refer to the accompanying disclosures for additional information concerning these results.

GLOSSARY OF TERMS:

Average Credit Quality: A measure of a debt issuer's ability to meet interest and principal payment obligations as denoted by letter designations assigned by credit rating agencies, calculated as the average quality of the fixed income portion of the portfolio only based on Standard & Poor's rating scale. (BBB- is classified as Investment Grade)

Standard Deviation: A statistical measure of the historical volatility of a mutual fund or portfolio, computed using monthly returns since inception and presented as an annualized figure. More generally, a measure of the extent to which numbers are spread around their average.

Weighted Modified Duration: The change in value (expressed in years) that a fixed income investment will experience from a one percent change in interest rates, calculated as the average effective duration of the fixed income portion of the portfolio only. Effective duration accounts for potential changes in cash flows when calculating the duration of bonds with embedded options.

Yield: The income return on an investment, calculated as the sum of the most recent dividend payments annualize (indicated yield), expressed as a percentage of the current value of the portfolio.

DISCLOSURES:

Astor Investment Management, LLC ("Astor") is defined for GIPS purposes as a registered investment adviser with the U.S. Securities and Exchange Commission.

Valuations are computed and performance is reported in U.S. dollars. Performance results assume the reinvestment of dividends. Certain client accounts may take dividends as distributions. Gross-of-fee returns are shown as supplemental information only and represent "pure gross" returns. "Pure gross" returns are calculated before the deduction of all fees, including trading, advisory, and administrative fees. A small number of client accounts may pay for trading costs as individual expenses and the gross-of-fees returns for these accounts would be net of trading expenses. Net-of-fee returns are calculated with a monthly model fee based upon end of period client account market values. Generally, accounts will pay for transaction costs within a bundled fee which may also include items such as advisory, administrative, and custodial fees. In addition to these expenses, Astor primarily purchases securities which contain embedded expenses. These costs result in a layering of fees. Please note performance results include accounts which pay trading costs separately and accounts which pay a bundled fee inclusive of advisory and trading costs. No performance-based fees are assessed. The annual fee paid by clients will typically range from 1.00%–3.00% of the clients' assets under management. Astor receives a portion of this total fee as compensation for provided advisory services. Astor's annual management fee varies based upon custodial arrangements, account size, and other factors. The composite includes accounts which were direct advisory clients of Astor and accounts which receive Astor's services as part of a wrap fee or sub-advisory program. The model fee is 1.50%, 1.80%, 1.85%, 1.40%, 1.40%, 1.25% and 1.25% for the periods 2011, 2012, 2013, 2014, 2015, 2016, 2017 and 2018. The model fee is representative of the actual fees charged to client accounts which cover trading, advisory, and other costs. The model fee produces a more conservative estimate of performance than previously reported.

The performance shown is of the Active Income Composite. The Active Income Composite is an actively managed strategy designed to produce income and to generate long-term capital appreciation by exclusively investing in exchange-traded funds (ETFs). The Composite invests primarily in fixed income securities and dividend-yielding equities. The portfolio manager may, at their discretion, depart from the targeted allocation range when they feel that certain sections of the financial markets are over or under valued. The strategy may employ the use of unleveraged inverse exchange-traded funds, designed to track a single multiple of the daily inverse performance of a given index. For purposes of defining the composite of accounts, a minimum account size of \$50,000 is imposed monthly. The benchmark is the Barclays Capital U.S. Aggregate Bond Index. The Barclays Capital U.S. Aggregate Bond is comprised of approximately 6,000 publicly traded bonds including U.S. Government, mortgage-backed, corporate and Yankee bonds with an average maturity of approximately 10 years. An investment cannot be made directly into an index. Barclays Agg Bond Index is a broad base index, maintained by Bloomberg L.P. since August 24th 2016, and is often used to represent investment grade bonds being traded in United States.

The Composite seeks to achieve its objectives by investing in Exchange-Traded Funds ("ETFs"). ETFs are subject to substantially the same risks as those associated with the direct ownership of the securities comprising the index on which the ETF is based. The value of an ETF will fluctuate in response to the performance of the underlying index or securities. ETFs are subject to investment advisory and other expenses which are separate from those fees charged by Astor. Therefore, investments in ETFs will result in a layering of expenses. Although ETFs are exchanged traded, a lack of demand can prevent daily pricing and liquidity from being available. Investors should carefully consider the investment objectives, risks, charges and expenses of the ETF held in the strategy before investing. This information can be found in each ETF's prospectus.

The Composite can also purchase unleveraged, inverse fixed income ETFs. Inverse ETFs attempt to profit from the decline of an asset or asset class by seeking to track the opposite performance of the underlying benchmark or index. Inverse products attempt to achieve their stated objectives on a daily basis and can face additional risks due to this fact. The effect of compounding over a long period can cause a large dispersion between the ETF and the underlying benchmark or index. Inverse ETFs may lose money even when the benchmark or index performs as desired. Inverse ETFs have potential for significant loss and may not be suitable for all investors.

Astor Investment Management LLC is registered with the Securities and Exchange Commission as an investment adviser. All information contained herein is for informational purposes only. This is not a solicitation to offer investment advice or services in any state where to do so would be unlawful. Analysis and research are provided for informational purposes only, not for trading or investing purposes. Astor and its affiliates are not liable for the accuracy, usefulness or availability of any such information or liable for any trading or investing based on such information. Opinions expressed are not intended as investment recommendations. These materials contain general information and have not been tailored for any specific recipient. These materials are not intended to cause Astor to become a fiduciary within the definition of Section 3(21)(A)(ii) of the Employee Retirement Income Security Act of 1974, as amended or Section 4975(e)(3)(B) of the Internal Revenue Code of 1986, as amended. There is no assurance that Astor's investment programs will produce profitable returns or that any account will have similar results. You may lose money. Past results are no guarantee of future results and no representation is made that a client will or is likely to achieve results that are similar to those shown. Factors impacting client returns include individual client risk tolerance, restrictions a client may place on the account, investment objectives, choice of broker/dealers or custodians, as well as other factors. Any particular client's account performance may differ from the program results due to, among other things, commission, timing of order entry, or the manner in which the trades are executed. The investment return and principal value of an investment will fluctuate and an investor's equity, when liquidated, may be worth more or less than the original cost. An investment cannot be made directly into an index. Please refer to Astor's Form ADV Part 2A Brochure for additional information regarding fees, risks, and services.

Astor Investment Management claims compliance with the Global Investment Performance Standards (GIPS®).
